

## For sale

Dyno Solar Battery

6 volts

Current list price: \$425 each

Used, selling for \$95 each or \$1400 if you take all 16 of them.

Approximately 11 years old.

Battery boxes also available.

You pick up near Leavenworth, WA

- Offers more capacity in less space than traditional 12 volt marine sizes
- Easier to install because one six volt is half the weight of a traditional 12 volt battery
- Larger, thicker plates than 4D or 8D batteries, thus offering better capacity and longevity
- A better value than most lead acid or gel cell batteries in terms of cost per pound, quality of construction, and overall weight per battery
- Allows the boat owner the flexibility of increasing battery capacity without structural modification of the vessel
- The L16HC has wider plates than the L16 for increased electrical capacity (both L16 batteries have the same size case)
- Overall dimensions (including terminals): 12-1/4"L x 7"W x 16-3/4"H
- Terminals - Marine (Tab)

### SPECIFICATION

Type	Deep Cycle
Res Cap	210
Height	16-3/4"
Width	7"
Plates/Cell	19
Weight	118 lb
Length	12-1/4"
Plate Thickness	0.140" Pos; 0.105" Neg
Amp Capacity @ 20 Hr Rate	350 Ah
